

F751 – 3U CompactPCI® DeviceNet Interface Board

- **4HP 32-bit/33-MHz CompactPCI®**
- **DeviceNet interface according to ISO-11898**
- **DeviceNet master and slave by loadable firmware**
- **Based on netX universal network controller**
- **Optical isolation with 1000 VDC isolation voltage**
- **Driver support for all common operating systems**
- **-20 to +70°C screened**

The F751 is a single Eurocard CompactPCI® DeviceNet controller; that only requires one slot on the CompactPCI® bus.

It features a DeviceNet interface supporting an ISO high-speed of up to 500 kBit/s. The physical interface is isolated from the system.

Master or Slave protocol configuration can easily be done by loadable firmware. The complete protocol stack is executed on the F751, and data exchange to the host is done via Dual-Port-Memory or DMA.

The F751 is based on the netX SOC. This highly integrated network controller supports parallel data

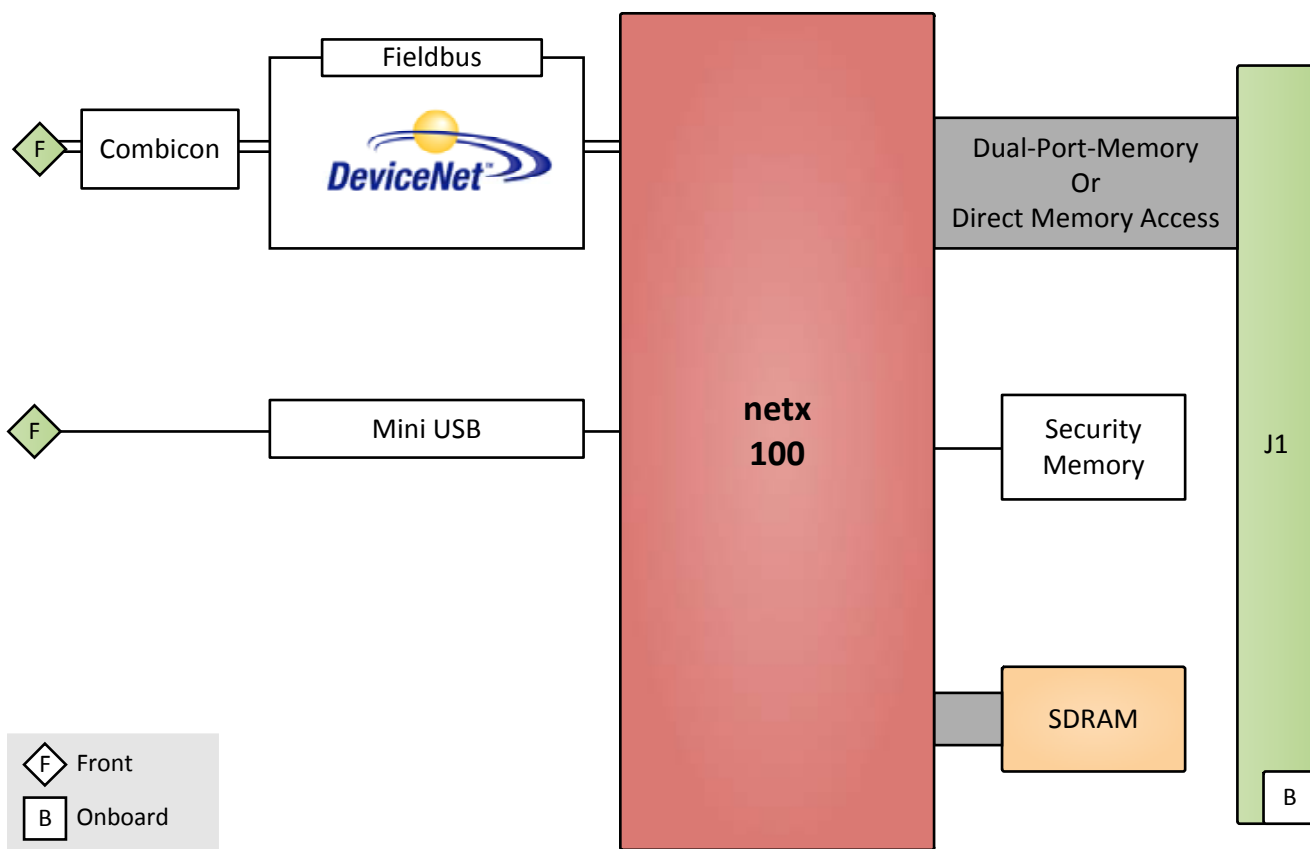

transmission via several data paths between the internal CPU and graphics engines, and the communication and host controllers. The netX SOC also controls the on-board memory and other peripheral interfaces such as UARTS, USB, SPI or I²C.

Communication works via a dual-port SRAM interface and is supported by window and pointer access mechanism. Interrupts are available in both directions from F751 to host and from host to F751.

The F751 supports a wide range of operating systems including Windows®, Windows® CE, Linux and VxWorks®.

The F751 has been designed for mission-critical industrial and for mobile applications with demand for high resistance regarding temperature, shock and vibration.

The date of issue stated in this data sheet refers to the Technical Data only. Changes in ordering information given herein do not affect the date of issue. All brand or product names are trademarks or registered trademarks of their respective holders.

MEN is not responsible for the results of any actions taken on the basis of information in the publication, nor for any error in or omission from the publication.

MEN expressly disclaims all and any liability and responsibility to any person, whether a reader of the publication or not, in respect of anything, and of the consequences of anything, done or omitted to be done by any such person in reliance, whether wholly or partially, on the whole or any part of the contents of the publication.

The correct function of MEN products in mission-critical and life-critical applications is limited to the environmental specification given for each product in the technical user manual. The correct function of MEN products under extended environmental conditions is limited to the individual requirement specification and subsequent validation documents for each product for the applicable use case and has to be agreed upon in writing by MEN and the customer. Should the customer purchase or use MEN products for any unintended or unauthorized application, the customer shall indemnify and hold MEN and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim or personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that MEN was negligent regarding the design or manufacture of the part.

In no case is MEN liable for the correct function of the technical installation where MEN products are a part of.
